## 4<sup>th</sup> Grade Math

Module 3: Multi-Digit Multiplication and Division

### Math Parent Letter

This document is created to give parents and students a better understanding of the math concepts found in Eureka Math (© 2013 Common Core, Inc.) that is also posted as the Engage New York material which is taught in the classroom. Module 3 of Eureka Math (Engage New York) covers Multi-Digit Multiplication and Division. This newsletter will discuss Module 3, Topic D.

Topic D. Multiplication Word Problems

### Things to Remember!!!

- Read the word problem carefully to figure out what steps are needed to solve each problem.

Write an equation that would allow someone to find the value of  $R$

**A**

250	250	250
-----	-----	-----

**B**

--

 $125$

$R$

$R + 125 = 250 \times 3$

$R = 250 \times 3 - 125$

Solve the equation above

Total of A	Two ways to Total B						
<table border="1" style="margin: auto;"> <tr><td>250</td></tr> <tr><td>x 3</td></tr> <tr><td>750</td></tr> </table>	250	x 3	750	<table border="1" style="margin: auto;"> <tr><td>750</td></tr> <tr><td>-125</td></tr> <tr><td>625</td></tr> </table> <p style="font-size: small;">How many numbers are between 125 and 750</p> <p style="font-size: small;"><math>125 \rightarrow 150 \rightarrow 625</math></p> <p style="font-size: small;"><math>25 + 600 = 625</math></p>	750	-125	625
250							
x 3							
750							
750							
-125							
625							

It takes 25 more to get to 150 and 600 more to get to 750.

## OBJECTIVE OF TOPIC D

- 1 Solve two-step word problems, including multiplicative comparison.
- 2 Use multiplication, addition, and subtraction to solve multi-step word problems.

## Focus Area- Topic D

Multiplication Word Problems

Multi-Step Problems

The table shows the cost of party favors found in 1 party bag. Each guest receives 2 balloons, 3 lollipops, and 1 bracelet. What is the total cost for 8 guests?

Item	Cost
1 balloon	24¢
1 lollipop	12¢
1 bracelet	34¢

One bag = \$1.18

2 balloons	$24¢ \times 2 = 48¢$
3 lollipops	$12¢ \times 3 = 36¢$
1 bracelet	$34¢ \times 1 = 34¢$

$\$1.18$

$48 + 36 + 34$

$48 + 70 = 118$

$?$

$\frac{118}{\times 8}$

$944$

The total cost for 8 party bags is \$9.44

$944¢$  or \$9.44

They paid for the party favors with a \$20 bill. How much change should they expect back?

$\$20.00$	$19.99$	$\overset{1}{\cancel{20}}.\overset{0}{\cancel{00}}$
$\$9.44$	$?$	$- 9.44$
		$10.56$
		$10.56$

Take a penny from both numbers to find the solution.  
If the same amount is subtracted from both numbers, the amount between the numbers will remain the same.

They would receive \$10.56 change.
