

Lesson 3

Objective: Apply concepts to create unit rulers and measure lengths using unit rulers.

Suggested Lesson Structure

■ Fluency Practice	(14 minutes)
■ Application Problems	(8 minutes)
■ Concept Development	(28 minutes)
■ Student Debrief	(10 minutes)
Total Time	(60 minutes)

Fluency Practice (14 minutes)

- Happy Counting 40–60 **2.NBT.2** (2 minutes)
- Making 10 by Identifying the Missing Part **2.OA.2** (3 minutes)
- Making 10 **2.OA.2** (9 minutes)

Happy Counting 40–60 (2 minutes)

- T: Let's do some Happy Counting!
- T: Let's count by ones, starting at 40. Ready? (Teacher rhythmically points up until a change is desired. Show a closed hand then point down. Continue, mixing it up.)
- S: 40, 41, 42, 43, (stop), 42, 41, 40, (stop), 41, 42, 43, 44, 45 (stop) 44, 43, 42, 41, 40 (stop) 41, 42, 43, 44, 45, 46, 47, 48, 49, 50 (stop) 49, 48, 47, (stop) 48, 49, 50, 51, 52 (stop) 51, 50, 49, 48 (stop) 49, 50, 51, 52, 53, 54 (stop) 53, 52, 51, 50, 49 (stop) 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60.
- T: Excellent! Try it for 30 seconds with your partner starting at 48. Partner B, you are the teacher today.

Make 10 by Identifying the Missing Part (3 minutes)

Materials: (S) Personal white boards

- T: If I say 9, you say 1 because 9 and 1 make 10.
- T: Wait for the signal, 15. (Signal with a snap.)
- S: 5.
- T: (Continue with possible sequence: 18, 12, 29, 21, etc.)

- T: This time I'll say a number and you write the addition sentence to make ten on your personal white board.
- T: 19. Get ready. Show me your board.
- S: (Students write $19 + 1 = 20$.)
- T: Get ready. Show me your board.
- T: (Continue with possible sequence: 18, 12, 25, 29, and 45)
- T: Turn and tell your partner what pattern you noticed that helped you solve the problems.
- T: Turn and tell your partner your strategy for finding the missing part.

Sprint: Making 10 (9 minutes)

Materials: (S) Making Ten Sprint

Application Problem (8 minutes)

Jared's parents buy him a new bed, but they are not sure if it is short enough to fit against his bedroom wall. Jared only has his dad's construction boot and a popsicle stick as measurement tools. Which measurement strategy would you suggest to Jared? (Students turn and talk to their partner and discuss the mark and move forward strategy.)

Can Jared figure out if the new bed will fit in his bedroom? How do you know? Use numbers, pictures, or words to explain your thinking.

Extension: Which tool would you use to measure, the popsicle stick or the construction boot? Why?

Jared can figure out if the new bed will fit. He can measure the length of the bed and wall with the boot. If the bed is 7 boots long and the wall is 9 boots, then it fits!

Note: The first portion of this problem reviews using iteration with one physical unit to measure and asks students to recall the mark and move forward strategy. The second portion asks the student to make a comparison between the length of Jared's bed and the length of his bedroom wall and decide if the bed is short enough to fit. During the second portion, students use personal white boards to draw a picture, adding numbers and words to support their conclusions. The extension portion is designed for accelerated learners, as this measurement concept of inverse relationship will not be addressed until Lesson 7. When all students have had a reasonable amount of time to work, they trade work with a partner. The teacher circulates and chooses a few students to share their partner's work aloud.

Concept Development (28 minutes)

Materials: (S) 1 30-cm long x 5-cm wide strip of tag board or sentence strips, 1 centimeter cube, and 1 index card or post-it note per student

T: Yesterday we used 1 centimeter cube to measure the length of different objects. Today we're going to create a tool that will help us measure centimeters in a more efficient way.

T: Let's make a centimeter **ruler**! Watch how I use my centimeter cube to measure and mark centimeters onto the tag board.

T: (Teacher models placing the cube and using the mark and move forward strategy to show 4 cm.) What did you notice about how I marked my tag board?

S: You did what we did yesterday. → You didn't leave any space between the cube and your pencil mark. → You made all the spaces (intervals) the same size. → You called it the mark and move forward strategy.

T: Now take out your tag board, centimeter cube, and pencil. Let's do a few centimeters together. (Turn tag board over and guide students to make their first 3 cm along with you.)

Support students who need assistance and allow those who show mastery to complete their rulers independently. As students complete their rulers direct them to explore measuring items around the room.

MP.6

After all students have completed their rulers invite them to the carpet with their rulers, centimeter cubes, index cards and pencils.

T: You have all completed a centimeter ruler. Now I would like to explore how we can use this tool. Let's take a look at some of the objects students measured around the room. I see that someone measured a math book. Let's take a look at how we might do that.

T: Turn to your neighbor and tell him how you would use your centimeter ruler to measure the length of your math book.

S: You can put the ruler next to the book and count how many lines. → Line up the ruler with the edge of the math book. Count how many lines there are.

T: (Line ruler up with the edge of the math book. Count the **hash marks** chorally with the students.) I am noticing there is a lot of room for mistakes here with so much counting. Does anyone have an idea about how I could make this easier the next time I use my ruler?

S: You can mark the lines with numbers!

NOTES TO THE TEACHER:

In order for students to create an accurate ruler, the hash marks have to be precise. Show students they can make their marks precise by placing the centimeter cube directly below the tag board and making a line where the cube ends. By doing this, students avoid adding an incremental amount to each length unit.

NOTES ON MULTIPLE MEANS OF REPRESENTATION:

Glue a toothpick or wikki stix to represent each of the hash marks for blind or visually impaired students, enabling them to feel the length units on their ruler.

- T: It is a wise idea to mark the lines with numbers. I can keep count more easily and also next time I won't have to count again. (Model marking the first two centimeters.)
- T: Notice I am making my numbers small so they fit right on top of the hash marks. Now it's your turn. (As students show mastery of marking their rulers with numbers, allow them to complete the numbers for all 30 hash marks.)
- T: Now that we have our rulers complete, let's practice using them together. Take out your index cards. Where should I place my ruler to measure the long side of the index card? Turn to your neighbor and tell them what you think.

(Guide students through measuring their index card and at least two more objects such as their pencil and pencil box. As they show mastery send them to their seats to complete the activity worksheet. If students need more practice, provide them with more opportunity, such as measuring their pencil.)

NOTES ON MULTIPLE MEANS OF ENGAGEMENT:

Assign students a *measurement discovery buddy* to clarify directions and/or processes. Buddies compare answers to check their work.

Problem Set (7 minutes)

Students should do their personal best to complete the Problem Set within the allotted 7 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Apply concepts to create unit rulers, measure lengths using unit rulers.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

You may choose to use any combination of the questions below to lead the discussion.

- Turn to your partner and compare your measurements on Problems 1–3. What did you do to measure accurately with your centimeter ruler?

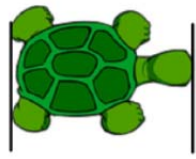

Lesson 3 2•2

Name _____ Date _____

Activity Sheet

Use your centimeter ruler to measure the length of the objects below.

1. The picture of the animal track is about _____ cm long. 

2. The picture of the turtle is about _____ cm long. 

3. The picture of the sandwich is about _____ cm long. 

COMMON CORE | Lesson 3: Apply Concepts to Create Unit Rulers, Measure Lengths Using Unit Rulers | engage ny | 2.A.6

- Tell your partner about how you made your ruler. What steps did you take to make it an accurate tool for measurement?
- What was different about using the mark and move forward strategy from using the ruler? Why is using the ruler more efficient than counting **hash marks**?
- Let's look at Problem 4(c) on the Problem Set. How could we use similar words to fit the situation in our application problem (How much shorter is the length of Jared's bed than the length of his bedroom wall?). What strategy would you suggest to compare the two lengths?
- What are some objects that are longer than our centimeter rulers? How can we measure objects that are longer than our rulers?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help you assess the students' understanding of the concepts that were presented in the lesson today and plan more effectively for future lessons. You may read the questions aloud to the students.

Lesson 3 2•2

4. Measure and label the length of each side of the triangle using your ruler.

a. Which side is the shortest? Side A Side B Side C

b. How much longer is side C than Side A? _____ centimeters longer.

c. What is the length of sides A and B together? _____ centimeters.

d. How much shorter is side C than side B? _____ centimeters.

d. What is the combined length of all three sides of triangle? _____ centimeters.

Name _____

Date _____

Use your centimeter ruler to measure the length of the objects below.

1. The picture of the animal track is about _____ cm long.

2. The picture of the turtle is about _____ cm long.

3. The picture of the sandwich is about _____ cm long.

4. Measure and label the length of each side of the triangle using your ruler.

- a. Which side is the shortest? Side A Side B Side C

- b. What is the length of Sides A and B together? _____ centimeters.

- c. How much shorter is Side C than Side B? _____ centimeters.

Name _____

Date _____

1. Use your centimeter ruler. What is the length in centimeters of each line?

a. Line a is _____ cm long.

Line a _____

b. Line b is _____ cm long.

Line b _____

c. Line c is _____ cm long.

Line c _____

2. Find the length across the center of the circle.

The length across the circle is _____ cm.

Name _____

Date _____

Measure the lengths of the objects with the centimeter ruler you made in class.

1. The picture of the fish is _____ cm long.

2. The picture of the fish tank is _____ cm long.

3. The picture of the fish tank is _____ cm longer than the picture of the fish.

4. Measure the lengths of sides A, B, and C. Write their length on the line.

- a. Which side is the longest? Side A Side B Side C
- b. How much longer is Side B than Side A? _____ cm longer.
- c. How much shorter is Side A than Side C? _____ cm shorter.
- d. Sides B and D are the same length. What is the length of Sides B and D together?
_____ cm.
- e. What is the total length of all four sides of this figure? _____ cm.
